## TOPCON AND RELCON INTEGRATE SOFTWARE

Topcon, a leader in UK Fundus imagery technology, and Relcon Software, designers of the highly acclaimed F.O.C.U.S.™ practice management software, have unveiled a new link between Relcon's Practice Management Software and Topcon's Fundus cameras through a series of software interfaces.

It is now possible to link patient records from Relcon's F.O.C.U.S.™ PMS directly to any camera supplied by Topcon which is using Topcon's ImageNet iBase image capture and analysis software, so that no patient details need to be re-keyed. A patient matching process between F.O.C.U.S.™ and iBase has also been written so that even those practices with existing patients in the Topcon image capture software can have the link retrofitted without losing previous records.

Additionally, for those wanting to use Relcon's stand-alone Fundus imaging software or "F.O.C.U.S.™ Clinical Records" for those who want to run the paperless practice, there is a solution to link directly to Topcon's cameras using the link through "TopConnect".

"This is a great leap forward for both Topcon and Relcon customers," said Al Chetwode, Managing Director of Relcon Software. "We are very excited by the possibilities that this level of integration can offer." said Andrew Yorke, Director of Topcon UK. "This is a major step towards the total practice solution where everything is fully integrated."
