

OcucoRelcon announce Universal Lens Catalogue

OcucoRelcon, the UK's largest optical IT company, has announced a deal with US optical lab software vendor CC Systems to provide a Universal Lens Catalogue for the UK and Ireland, as part of its cutting edge project to offer electronic ordering capabilities between optical retailers and their suppliers.

Users of OcucoRelcon's practice management systems will soon be able to use new electronic ordering modules to place and track orders to around 60 UK labs and manufacturers. At the same time Rx labs and manufacturers who use the Labman or Labzilla laboratory management systems will be able to source validated electronic orders from any of around 1,000 optical practices throughout the UK and Ireland.

The Universal Lens Catalogue is a significant step towards driving long-needed standards into the optical market and making the electronic supply chain available to all Rx labs and optical practices, turning the dream of a fully integrated ordering and manufacturing process into reality.

OcucoRelcon, which supplies independent opticians, small groups and large chains with Acuitas™ and F.O.C.U.S.™ practice management software (PMS), also supports and distributes systems from DRS Computing and CC Systems, developers of two of the most highly respected lab management software systems, Labman and Labzilla.

"This is a very exciting time for both optical retailers and their Rx labs who will both benefit from a step change in technology being spearheaded by OcucoRelcon." Says Al Chetwode, CEO of OcucoRelcon.

Stephen Cohen, Managing Director of CC Systems agrees, "This will revolutionise lab-retailer relationships going forward. Once you have a catalogue like this in place the whole world opens up to you, because the technology is only half the story."
